

MODEL 272PL GAS PRESSURE REGULATOR

General Description

Edition
GD272PL.07

BRYAN DONKIN RMG CANADA LIMITED
Serving the Gas Industry—WORLDWIDE

MODEL 272PL GAS PRESSURE REGULATOR

General Description

Applications

- Primarily utilized for commercial, industrial and multi-installation applications
- For natural gas and all non-corrosive gaseous media
- Various options for specialty applications
- Fixed Factor Billing model available for PFM applications, that ensure outlet pressure accuracy to +/- 1% absolute pressure

Characteristics

- Specifically designed for safe, accurate, pressure reduction of gaseous media
- Wide inlet pressure range 5–280 psig (0.35-19 bar)
- Maximum inlet and operating pressure 280 psig (19 bar)
- Pilot-loaded for superior accuracy and outlet pressure control with changes in inlet pressure
- Outlet pressure settings from 2 psig to 60 psig (0.14-4 bar) over 3 pilot spring ranges
- 2 different orifices available for increased capacity performance
- Inline body (180°) design
- 2" flanged version available in ANSI150 or PN16 with flat or raised face profiles
- Available with Internal Impulse or Control Line (I.C.L.) or External Impulse or Control Line Connections (E.C.L.)
- Ease of maintenance due to interchangeable diaphragm casing cartridge accessible via a union nut to the body
- Various safety slam-shut valve (SSV) models available for pressure/flow cut-off protection
- Custom designed and pre-fabricated regulator assemblies and pressure reducing stations available
- Sectional and dimensional drawings available upon request.

MODEL 272PL GAS PRESSURE REGULATOR

General Description

◇ Outlet pressures from 2 psig to 60 psig over 3 pilot spring ranges. Set point can be adjusted easily with standard adjustable wrench.

◇ 1/4" threaded pilot regulator vent connection protected by a molded plastic fitting that is easily removed to attach vent extender or vent-line.

◇ Model 600 Pilot Regulator for superior accuracy and outlet pressure control.

◇ Reinforced diaphragm for increased speed of response and durability.

◇ Cartridge style regulator diaphragm casing design so retrofitting new regulator casings is very easy without removing regulator body from the pipe-work.

◇ Under & Over Pressure Safety Slam-Shut Valve (UPCO/OPCO) options available

◇ Over Pressure Safety Slam-Shut Valve (OPCO) options available

◇ Integral slam-shut valves available to protect against under (UPCO) and over pressure (OPCO) conditions in the downstream pipe-work. Slam-shut valves also available with low differential pressure cut-off and thermal trip (T-type) protection feature to shut gas off if regulator is engulfed in a fire.

◇ Pressure test points available at inlet & outlet chambers of the body, as an option.

◇ Pilot regulator supply line at the orifice.

◇ Available with Internal Impulse or Control Line (I.C.L.) or External Impulse or Control Line Connections (E.C.L.)

◇ 2" flanged connections available in ANSI150 or PN16 with flat or raised face profiles

-  Atmospheric Pressure
-  Inlet Pressure
-  Outlet Pressure
-  Loading Pressure

MODEL 272PL GAS PRESSURE REGULATOR

General Description

Available Constructions

272PL: pilot operated regulator

272PL-309LP OPCO: pilot operated regulator with integral Over Pressure Cut-Off safety slam shut valve (cut off pressure up to 8 psig)

272PL-309LP UPCO/OPCO: pilot operated regulator with integral Under and Over Pressure Cut-Off safety slam-shut valve (cut off pressure up to 8 psig)

272PL-309LP2 OPCO: pilot operated regulator with integral Over Pressure Cut-Off safety slam-shut valve (cut off pressure up to 22 psig)

272PL-309LP2 UPCO/OPCO: pilot operated regulator with integral Under and Over Pressure Cut-Off safety slam-shut valve (cut off pressure 22 psig)

272PL-309LP4 OPCO: pilot operated regulator with integral Over Pressure Cut-Off safety slam-shut valve (cut off pressure up to 66 psig)

272PL-309LP4 UPCO/OPCO: pilot operated regulator with integral Under and Over Pressure Cut-Off safety slam-shut valve (cut off pressure 66 psig)

Thermal Protection (T-Type): no internal relief capacity with safety diaphragms and integral safety slam-shut valve (OPCO or UPCO/OPCO) that has shut-off protection if assembly is engulfed in a fire. Assembly has many steel component parts. Only available up to cut off pressures of 12 psig.

I.C.L. Type: Internally sensing or internal control line to measure outlet pressure

E.C.L. Type: Externally sensing or external control line required to measure outlet pressure in downstream pipe-work. Diaphragm casings drilled and tapped 1/2" NPT or BSPT to connect downstream sensing line.

F version: complete with inlet mess filter

Body Sizes and Connection Types

Flanged Type Body

- 2" flanged inlet/outlet
- ANSI150RF, ANSI150FF, PN16RF, PN16FF types

MODEL 272PL GAS PRESSURE REGULATOR

General Description

Pressure Ratings

Maximum Recommended Inlet Pressure – 272PL

- 280 psig (19 bar)

Materials of Construction

Screwed Body	Cast Iron
Flanged Body	Ductile Iron
Pilot Regulator Diaphragm Casings	Machined Aluminum
Pilot Supply Line	Copper
Diaphragm Casings	Die Cast Aluminum
Diaphragm	Molded Nitrile Rubber with Nylon Reinforcing
Valve Head (Seat)	Polyurethane
Diaphragm Plates	Steel
Orifice	Brass or Stainless Steel (T-type)
Fasteners	Steel
Top Cap (standard)	Aluminum

Weights

- w/ ductile iron flanged body – 35 lb. (15.9 kg)
- w/ 309 LP - add 2.2 lb. (0.9 kg)
- w/ 309 LP2 – add 2.5 lb. (1.0 kg)
- w/ 309 LP4 – add 8.0 lb. (3.2 kg)
- w/ 309 T-Type – add 5.0 lb. (2.0 kg)

Temperature Rating

- -40° to 60° Celsius
- -40° to 120° Fahrenheit

MODEL 272PL GAS PRESSURE REGULATOR

General Description

Outlet Pressure Range

Range (imperial)	Range (metric)	Spring Number/Colour

MODEL 272PL GAS PRESSURE REGULATOR

General Description

Capacity Calculation or Correction Factors for Other Gases

<u>Gas Type</u>	<u>Specific Gravity</u>	<u>Correction Factor (CF)</u>
Air	1.00	0.77
Butane	2.01	0.55
Carbon Dioxide (Dry)	1.52	0.63
Carbon Monoxide (Dry)	0.97	0.79
Natural Gas	0.60	1.00
Nitrogen	0.97	0.79
Propane	1.53	0.63
Propane-Air-Mix	1.20	0.71

Vent and Body Orientations

Orientation – Body Position Letter followed by Vent Position Number

For Other Correction Factors

$$C_F = \sqrt{\frac{0.6}{\text{Sg of Gas}}}$$

Vent Direction only available in Position A

Body Direction only available in Position B & D

MATCH GAS FLOW INDICATING ARROW FOUND ON CASTING

MODEL 272PL GAS PRESSURE REGULATOR

General Description

Internal Relief Valve and Safety Slam Shut Valve Options

Regulators for Reduced Clearances or Venting Limitations

- Please contact one of our representatives for more detailed information

Regulators for Indoor Installations without Requirement for Vent-Line

- Please contact one of our representatives for more detailed information

Internal Safety Relief Valve (SRV) Description

- The SRV is designed to monitor the pressure in the outlet chamber or downstream of the regulator and to relieve by either venting gas leakages or full flow capacity (depending on the device design) into the atmosphere in the event of an over-pressure condition.
- If the pressure in the measuring chamber exceeds the force of the set point spring of the relief valve, the diaphragm rises and opens the relief valve. The gas then flows from the outlet pressure line to atmosphere or another desired location.
- The relief gas pressure and flow is discharged until the pressure is returned to the predetermined safe level.
- The safety relief pressure of the internal relief valve occurs slightly above the set pressure of the main spring or outlet pressure

Safety Slam Shut Valve (SSV) Description

- The SSV is designed to monitor the outlet pressure and to interrupt the gas flow, if preset limits are exceeded.
- This preset pressure is adjustable in the field.
- If the measured pressure reaches the set point of the SSV, a release mechanism is triggered and the SSV closes the valve on the inlet pressure side of the regulator. This closing function completely blocks the forward movement of gas past the SSV.
- Safety slam shut valves are available in over pressure cut off (OPCO) protection or under and over pressure cut off (UPCO/OPCO) protection.
- After the SSV is tripped, the condition that triggered the closing of the valve must be addressed and then the SSV can be manually reset.
- Thermal trip protection is also available as an option to shut the gas flow off, if the safety slam shut valve is exposed to high temperatures or engulfed in a fire (T-Type).
- Please contact one of our representatives for the technical brochure on all of our safety slam shut valves.

MODEL 272PL GAS PRESSURE REGULATOR

General Description

External Control Line Versions (E.C.L.)

- Regulators with an external control line have the throat of the regulator blocked with a seal and the outlet pressure measuring chamber (lower diaphragm casing) drilled and tapped for an outlet pressure sensing line. It is recommended that the sensing point is a minimum of 5 times the outlet pipe diameter downstream of the regulator.
- Sensing outlet pressure via an external control line enables the regulator to respond more accurately to the downstream system.

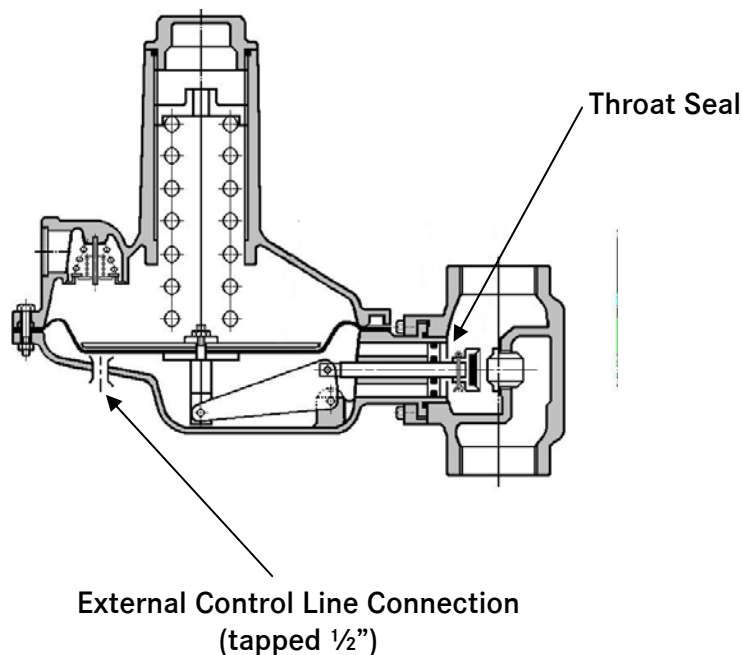

Diagram of Regulator Station and Recommended Location of External Control Line (E.C.L.) Connections

MODEL 272PL GAS PRESSURE REGULATOR

General Description

Commissioning and Installation Instructions

Please contact one of our representatives for the installation and commissioning instructions. Additionally, the commissioning and installation instructions are found in each box that the equipment is shipped in and can be downloaded from the website.

Ordering Information

1. Inlet pressure (minimum and maximum)
2. Outlet pressure requirement
3. Flow requirement (minimum and maximum)
4. Type of gas
5. Temperature
6. Pipe connections (inlet and outlet)
7. Internal or external impulse (sensing)
8. Safety options or requirements (SRV and/or SSV)
9. Vent and body orientation
10. Other critical information (system design or description)

Product Portfolio

- Pressure regulators for every application from domestic, commercial, industrial to transmission line, city gate stations and other gas utility applications.
- Safety relief valves
- Safety slam shut valves
- Metering equipment (rotary displacement, turbine, vortex shedding, ultrasonic)
- Volume correctors (temperature and pressure)
- Filters
- Underground pressure regulator and metering modules
- Ball valves
- Station design and assembly (prefabricated stations, skid-mounted assemblies, small regulator/meter-set assemblies)
- Flame arrestors
- Data logging and software
- Check and non-return valves
- Training and after-sales service
